

## AmpSafe™ Quick Start Guide

Power on the AmpSafe™ unit and wait for the LED to blink green

You can choose a wired or wireless connection...follow one of the chosen paths below.

### Wired

- Connect the USB cable to the AmpSafe™ unit and to the BYOD as shown in the photo above.
- Open a Web browser on the BYOD and navigate to <http://sn00000.ampsafe> (where "00000" is the serial number of the unit which can be found on the unit's enclosure).
- If this does not connect, enter the following numeric IP address in the Web browser: <http://192.168.42.1>

### Wireless

- The AmpSafe™ unit will broadcast a network name (SSID) of "AmpSafe-SN00000" (where "00000" is the serial number of the unit which can be found on the unit's enclosure). On the BYOD, select this Wi-Fi network.
- Open a Web browser on the BYOD and navigate to <http://sn00000.ampsafe> (where "00000" is the serial number of the unit which can be found on the unit's enclosure).
- If this does not connect, enter the following numeric IP address in the Web browser: <http://192.168.43.1>

Once a wired or wireless connection is established and the home page appears in the Web browser, you can get further guidance from the home page by clicking Settings >> Help
